

Brainstorming & Ideation

FitBuddy AI — Project Deliverable

Define the problem, user need, and core FitBuddy AI idea before detailed requirements and design.

Deliverables in this single phase document

- Problem Statement
- User/Empathy View
- Idea Prioritization & Scope

Evidence status — Documented project scope; no separate user-interview results were supplied.

1.1 Problem Statement

FitBuddy AI is designed as a general-wellness web application that takes a user's profile, goal, and preferred intensity and turns that input into a structured 7-day wellness/activity plan. It also provides a practical nutrition or recovery tip and supports feedback-driven revision.

1.2 User / Empathy View

- The user wants a simple way to enter profile information and receive a structured weekly activity plan.
- The user needs the plan to be reviewable day by day rather than receiving an unstructured block of advice.
- The user may want a practical nutrition/recovery tip alongside the activity plan.
- The user may need to request a change after reviewing the first plan.
- The interface should be responsive and easy to use in a browser.

1.3 Idea Prioritization

The supplied project already defines the core idea through its feature set. The prioritized scope below is therefore derived from documented features rather than from an external brainstorming workshop.

Priority Area	FitBuddy AI scope
Core user value	Generate a structured 7-day plan from profile data
Personalization	Goal + preferred intensity + profile inputs
Guidance	Nutrition/recovery tip
Iteration	Feedback-based plan revision
Technical foundation	FastAPI, Jinja2, SQLite/SQLAlchemy, Gemini
Quality	Input validation, responsive UI, automated tests

Project Evidence / Screenshots

The screenshot shows the FitBuddy AI landing page with a dark green background. At the top, the logo 'FitBuddy AI' is on the left and 'API Docs' is on the right. Below the logo, the text 'PERSONALIZED WELLNESS' is displayed. The main heading is 'Build a plan that fits your routine.' followed by a subtext: 'Enter a few details and FitBuddy creates a structured 7-day activity plan plus a practical nutrition or recovery tip.' Below this is a form titled 'Tell us about you'. The form has six input fields: 'User ID' (text, value: u1001), 'Name' (text, value: Vigneshwaran), 'Age' (text, value: 20), 'Weight (kg)' (text, value: 55), 'Goal' (dropdown, value: Flexibility), and 'Preferred intensity' (dropdown, value: Medium). A large green button labeled 'Generate My Plan' is at the bottom of the form. A small disclaimer at the very bottom reads: 'Demo mode works without an API key. This app is for general wellness education, not medical advice.'

Screenshot evidence: FitBuddy AI landing page and profile form.

This screenshot is similar to the first one, showing the FitBuddy AI landing page. The main heading and subtext are identical. The 'Tell us about you' form has the same layout but with different input values: 'User ID' is u1001, 'Name' is hemnath, 'Age' is 20, 'Weight (kg)' is 60, 'Goal' is Flexibility, and 'Preferred intensity' is Medium. The green 'Generate My Plan' button and the disclaimer at the bottom are also present.

Screenshot evidence: alternate profile input example.

Source note: This phase document was converted from the supplied FitBuddy AI project documentation, README, configuration/dependency information, and supplied project screenshots. Where the source did not provide a measured result, named team member, or actual date, the document does not present one as a completed fact.
