

Project Development Phase

FitBuddy AI — Project Deliverable

Document how the FitBuddy AI solution is organized, implemented, and exposed as user-facing functionality.

Deliverables in this single phase document

- Coding & Solution
- Code Layout, Readability & Reusability
- Functional Features

Evidence status — Implementation structure and features are documented; this document does not claim code-quality metrics that were not measured.

5.1 Coding & Solution

The README describes a FastAPI application with Jinja2 templates, SQLite/SQLAlchemy persistence, Gemini integration through google-genai, local demo mode, feedback-based revision, REST APIs, validation, responsive UI, and automated tests.

5.2 Code Layout, Readability & Reusability

- Configuration is separated into app/config.py.
- Database setup is separated into app/database.py and persisted models into app/models.py.
- Request/response validation is separated into app/schemas.py.
- Generation behavior is separated into app/gemini_generator.py.
- Routes are separated into app/routes.py.
- The main FastAPI application is created in app/main.py.
- HTML templates and CSS are separated from Python application code.
- Tests are kept under tests/test_app.py.

5.3 Functional Features Implemented

- 7-day wellness/activity plan generation.
- Nutrition/recovery tip generation.
- Feedback-based plan revision.
- JSON REST APIs: health, generate, feedback, users.
- Browser form workflow for generation and feedback.
- All-users/admin view.
- Input validation and responsive UI.

5.4 Dependencies

The supplied requirements include FastAPI, Uvicorn, Jinja2, python-multipart, SQLAlchemy, Pydantic, pydantic-settings, python-dotenv, google-genai, httpx, and pytest.

Project Evidence / Screenshots

Screenshot evidence: working generated-plan UI.

Screenshot evidence: feedback-driven updated-plan UI.

Source note: This phase document was converted from the supplied FitBuddy AI project documentation, README, configuration/dependency information, and supplied project screenshots. Where the source did not provide a measured result, named team member, or actual date, the document does not present one as a completed fact.
